

Safety Net Training Copy

FASET Approved Safety Net Rigging, Inspecting and Repair Training...

The Health and Safety Act states that, when working at heights, a fall arrest system should only be used as a last resort if all other measures have been deemed impracticable, safety netting is a practical solution to eliminate the hazard.

Don't Get Fined!

Worksafe NZ now have over 200 inspectors actively working to stop unsafe practices.

There are fines being issued to individuals and companies if a breach of health and safety rules occur.

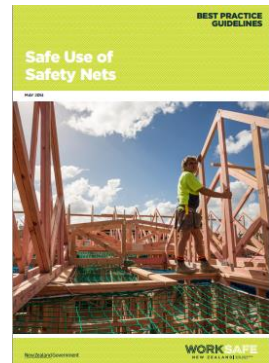

Doing nothing towards your own safety and safety of others is no longer an option!

Download a copy of the Best Practice Guidelines?

If you need more information about the safe use of safety nets, download the Best Practice Guidelines, it's an interesting read.

Please put this image of the guidelines on the page and make it clickable.

I have supplied a copy of the guidelines.

Why Use Safety Nets?

- Safety nets save lives
- Reduce the risk of injury from falling objects such as tools and materials
- Nets are a practical solution to eliminate the Hazard
- Safety harnesses and static lines should be a last resort
- Reduce the risk of suspension trauma
- Increased confidence of the workforce resulting in increased productivity

How We Can Help You...

We can offer you and your team approved FASET (Fall Arrest Safety Training) at your work site, or at one of our training facilities in Auckland, Tauranga or Christchurch.

FASET Training is the ONLY recognised route for those people wishing to **Install, Inspect** or **Maintains** Safety Nets.

Our Safety Net Trainer

Our trainer is New Zealand's only FASET approved Safety Net Trainer, he'll provide your riggers with the training on how to install safety nets properly as required by Worksafe NZ and the Code of Practice for installing safety nets on construction sites – BS 8411 – 2007.

Course Information...

FASET Safety Net Riggers Course

The FASET approved training course is a 2 day course ending in an assessment in theory and practical elements that will determine if trainees are competent to rig safety nets.

The trained staff is accredited for the installation of safety net systems in New Zealand.

The course covers a wide range of associated disciplines and includes the following units:

- Conforming to General Safety in the Workplace
- Conforming to Efficient Working Practices in the Workplace
- Moving and Handling Resources in the Workplace
- Utilising Provision of Fall Protection Systems in the Workplace
- Installing and Removing Safety Net Rigging in the Workplace

3 Photos to be put here. Photos supplied.

Successful applicants will get a 5 year FASET card stating they have been deemed competent and familiar with the Code of Practice.

Cost & Availability

We price each course individually to enable us to save you as much money as possible.

For Course Locations, Dates, Bookings and Quotes, please call Terry on 021 500 486.

FASET Inspectors Certificate

For Site Managers and Health & Safety Managers a one day course in theory and practice that will give you the qualification needed to inspect safety nets installed by certified and qualified safety net riggers.

The training courses consist of two sections:

Theoretical: Where theoretical aspect of the safety standards and maintenance are discussed.

Practical: Where real installations are made, allowing trainees to experience the same situations that they could find in everyday work situations.

Safety Net Training Requirements:

- No previous experience needed but it is advantageous
- Courses can be at your venue or our training facility in Auckland
- Courses are booked on a first come first served basis
- 4 – 6 people needed per course
- Facilities in Christchurch and Tauranga as well

Cost & Availability

We price each course individually to enable us to save you as much money as possible.

FASET Safety Net Repair course

Safety nets may be repaired by a competent person i.e. who has completed a recognised training course* within the past 5 years.

*A recognised training course is a FASET Net Repair Training Certificate

Nets should preferably be repaired in a controlled environment i.e. away from the site.

This one day course provides knowledge on how to repair knotless safety nets in line with FASET guidance.

For many years this has been the domain of manufacturers where similar, yet different techniques made it difficult for net owners to identify one approved method to repair their own nets.

Manufacturers training has focussed on the method of repair and not dealt with wider issues such as net examination, types and causes of damage, fleet management and record keeping.

The FASET course addresses these topics.

FASET have agreed with all manufacturers operating in the UK on one standard repair and this is exactly what we teach you.

IMPORTANT: This course is NOT designed for Safety Net Riggers to carry out repairs on site. It is NOT a train to train course.

Image to be entered here as shown.

The safety net repair course also covers;

- Legislation & Standards
- Parts of a safety net and the way it works
- Typical causes & results of damage
- Tagging and Logging in line with standards
- Test, Practical Tuition
- Assessment and Feedback

After course completion candidates will be able to:

Understand how safety nets work and their typical applications. They will be able to put together and operate a net maintenance programme, identify damage and carry out permanent repairs correctly.

The Candidates are provided with:

FASET Reference Notes, 5 year Attendance Certificate & FASET Registration.
